

## ADVANTAGES

- The housing minimizes exposure to harmful contaminants during filter service through the use of a PVC bag enclosure system. The entire filter changing process isolates personnel from hazardous materials.
- Designed for use in critical processes where hazardous airborne materials must be prevented from escaping to the atmosphere. Air filters may be replaced using a control barrier to protect change-out personnel from contaminants within the housing or contaminants captured by the filters.

## Application

Chemical manufacturing facilities  
Food processing  
Genetic research and biotechnology facilities  
Hospital Isolation Suites to prevent the spread of infectious diseases  
Industrial processes exhaust  
Microelectronic and semiconductor facilities  
Nuclear power plants  
Pharmaceutical facilities  
Radioisotope handling facilities  
University research laboratories  
US Department of Energy Facilities  
Veterinary research and animal disease laboratories  
Specific United States Government facilities including military and the Department of State.
